

**I. Listing of Claims**

1. (Currently Amended) A fastener for installation into a threaded bore, the fastener comprising a bolt having a longitudinal axis, the bolt having a head and a threaded shank extending from the head, the threaded shank being dimensioned to co-operate with the threaded bore; an end cap mounted on the free end of the shank remote from the head being provided with an end cap, the shank of the bolt terminating with an axially extending projection for receiving the end cap, wherein the end cap is configured to be rotatable about the axis of the bolt, the end cap having a yieldable formation including a plurality of radially outwardly extending flanges to engage frictionally with the threaded bore when the end cap and the bolt are inserted axially into the bore to retain the fastener in the bore, whereby the threaded shank of the bolt is configured to engage with the threaded bore when an axial pressure is applied to the fastener.

2. (Previously Presented) A fastener according to Claim 1 wherein the end cap is a separate component which is secured to the bolt.

3. Cancelled.

4. (Currently Amended) A fastener according to Claim 3 1 wherein the shank of the bolt terminates with an axially extending projection having includes an enlarged head, the end cap having an internal bore dimensioned to receive the projection and the head.

5. Cancelled.

6. (Currently Amended) A fastener according to Claim 5 1 wherein at least some of the flanges have a diameter greater than the diameter of the threaded shank.

7. (Currently Amended) A fastener according to Claim 5 1 wherein at least some of the flanges have chamfered leading edges.

8. (Currently Amended) A fastener according to Claim 5 1 wherein at least some of the flanges are segmented.

9. (Currently Amended) A fastener according to Claim 5 1 wherein at least a terminal flange of the flanges has a diameter less than that of succeeding flange of the flanges.

10. Cancelled.
